Sebastian Namek

Senior Frontend Software Engineer

Toronto, Ontario | seb.namek@gmail.com | LinkedIn | GitHub | 613-265-9416

Senior software engineer with 8+ years of experience building polished, customer-facing web and mobile products in enterprise environments. Deep experience with React, TypeScript, Tailwind CSS, reusable frontend architecture, GraphQL and REST integrations, testing, and end-to-end delivery. Leads cross-functional initiatives, mentors engineers, and applies AI-assisted workflows to ship reliable products faster.

Technologies and Languages

Frontend	React, TypeScript, JavaScript, HTML, CSS, SASS, Redux, RxJS, React Native, Three.js, React Router
Architecture & APIs	Reusable components, Design systems, State management, GraphQL, REST APIs, Node.js, Python
Quality & Delivery	Jest, React Testing Library, Google Tag Manager, Sentry, Git, GitLab CI/CD, Docker, AWS, Jira
AI Engineering	AI-assisted development, Custom AI agent workflows, Prompt engineering, Cursor, Copilot
Data	PostgreSQL, MySQL, MongoDB, SQL
Sec. & Compliance	PCI training, SAST/SCA audits and remediation, WCAG, OWASP

Key Achievements

- Reduced feature delivery time by 3x through AI-assisted development workflows.
- Increased legacy project test coverage to 90%+ using custom AI tooling.
- Doubled team velocity by enabling developers to become proficient in Adobe Experience Manager (AEM), eliminating reliance on an external development team.
- Delivered mobile first enterprise solutions for IBM, Bell, Virgin Mobile, AIR MILES, and PayPower product flows.
- Specialized in React, TypeScript, GraphQL, and scalable architecture.
- Strong experience communicating and coordinating with teams distributed globally and experience with on call incident response
- Experience optimizing front ends to meet core web vitals

Work Experience

Senior Software Developer — **IBM** — **Nov 2021–Aug 2026**
User Experience Team — Toronto, Ontario

- Delivered enterprise customer-facing web applications for Bell and Virgin Mobile purchase flows.
- Turned data heavy flows with complicated business logic, into sortable, paginated product display pages.
- Designed and implemented an AI-assisted engineering workflow that automated feature implementation, testing, analytics instrumentation, and code review, reducing feature delivery time by approximately 3× while improving engineering quality.
- Developed an AI testing agent that took legacy projects and increased test coverage to 90%, significantly increasing code confidence and catching bugs before deployment.
- Led and supported a large team responsible for reducing vulnerabilities by upgrading outdated packages in 30+ legacy projects company wide.
- Designed and delivered reusable application components and end-to-end customer features, integrating React frontends with GraphQL APIs inside a large-scale enterprise platform.
- Owned the technical delivery of multiple projects from estimation and architecture through testing, feature-flagged deployment, and post-release support.
- Reviewed hundreds of pull requests while maintaining engineering standards.
- Mentored developers and wrote documentation for new flows and processes.

- Collaborated with product managers, designers, QA, and backend engineers to define, implement, and deliver customer-facing features backed by GraphQL and REST APIs.
- Worked with the security team to ensure features were deployed with 0 vulnerabilities.
- Worked with Gitlab CI/CD to ensure the success of daily deployments and monthly releases.
- Investigated and resolved production issues while partnering with security and infrastructure teams to maintain highly available customer-facing applications.
- Collaborated with globally distributed engineering teams

Stack/Frameworks: React, Redux, Rxjs, GraphQL, ASP.net MVC

Lead Developer **Quantum Mob** **2019–2021**
Toronto, Ontario

PayPower Contract

- Led the development of the PayPower prepaid credit card mobile application using React Native, managing a cross-functional team from project planning through production release.
- Architected and developed the PayPower mobile application from the ground up, integrating with existing backend services to provide customers with a modern mobile banking experience.
- Managed application releases and deployment through the Apple App Store and Google Play Store using Microsoft App Center.
- Improved agile practices resulting in greater documentation and clear deliverables resulting in 30% less defects than the previous sprint.
- Implemented Sentry for application observability, enabling real-time error tracking and performance monitoring.

Stack/Frameworks: React native, expo, redux-sagas, appcenter, sentry

AirMiles Contract

- Contributed to a component library using story book and Adobe Experience Manager (AEM).
- Became the team's subject matter expert on Adobe Experience Manager (AEM), enabling the team to eliminate dependence on external contractors and approximately double feature delivery velocity.

Stack/Frameworks: React, Redux, AEM, Jest

Software Developer **SpinVR** **2018–2019**
Toronto, Ontario

- Developed and maintained features for **BrioVR**, a web-based platform for creating and distributing VR/AR experiences.
- Worked across frontend and backend services to deliver complete product features.
- Designed and implemented the schema, and front end for a reusable notification and social interaction system, including like and notification functionality shared across multiple application repositories.
- Created an internal npm package that contained core logic that could be re-used across different projects which reduced code duplication while maintaining seamless integration with each application's state management.
- Led a significant refactor of the platform's Three.js animation system, redesigning the underlying data model to improve flexibility and support advanced model customization.
- Planned and executed a production data migration to support the new animation model architecture while maintaining compatibility with existing content.
- Generalized core application logic to improve maintainability, reduce complexity, and support future feature development.

Stack/Frameworks: React, Redux, NodeJS, Postgres, Jest

Education

- **Immersive Web Developer Bootcamp,** Lighthouse Labs **2017**
- **B.Sc. Ecology and Evolution,** University of Ottawa. **2009–2014**
